

# Ispring Converter Fact Sheet

## What software is this?

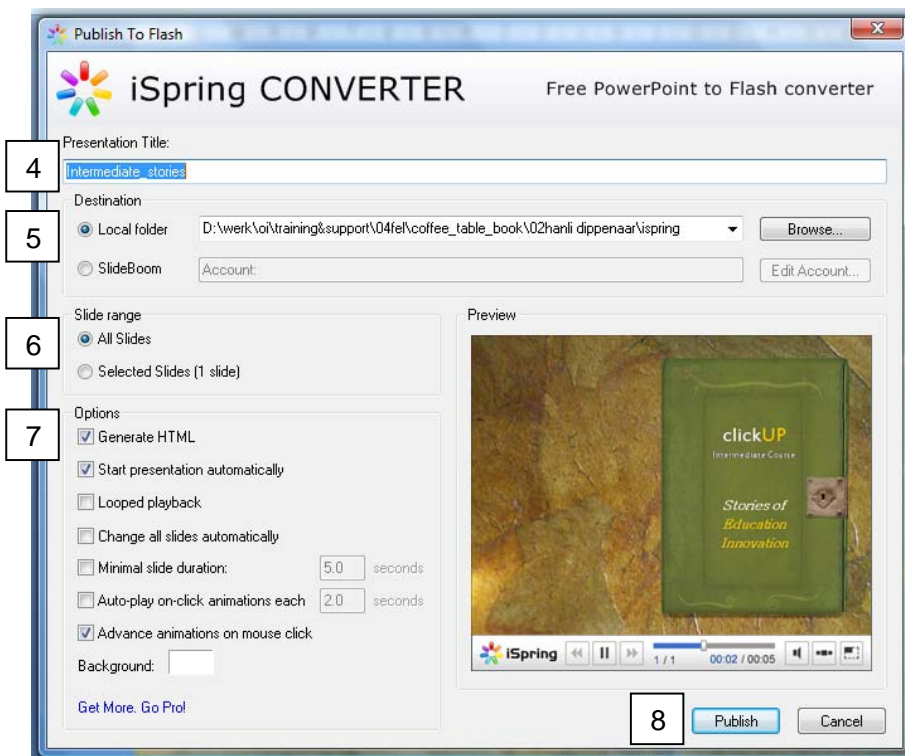

It allows you to convert your PowerPoint files to Flash files while keeping all the animations and transitions just like you build it into PowerPoint. Read more about the product at <http://www.ispringsolutions.com/>.

There are a few products available, but the Ispring Converter is FREE! So, once you have downloaded it and installed it onto your computer, it will be added to your PowerPoint toolbar.

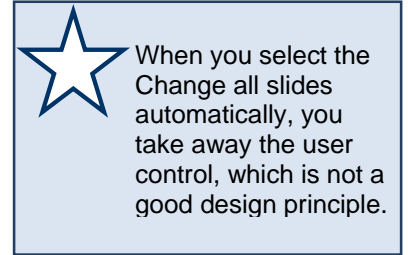

## How do I use the Ispring Converter?

1. Create the PowerPoint and add the sound, transitions, animations, etc until it is the final product.
2. Click on the **iSpring Converter** option.
3. Select the **Publish** option. The following screen will be displayed:

4. Add a title for the presentation.

5. Browse to the location on your computer where the Ispring files need to be saved.
6. Select the option to include ALL the slides.
7. Play around with the different options – the options that are used most is:
  - Generate HTML (so that you can also link it from within clickUP to the HTML page)
  - Start presentation automatically
  - Advance animation on mouse click.
8. Click on **Publish**.

Three files will be published in the location you specified:

- Javascript file (.js)
- HTML file (.html)
- Flash file (.swf)

All 3 files must be loaded in the same folder and then you can create your link to the .html file.

If you struggle to create links to the Ispring converted PowerPoint (.html file), please contact an Instructional Designer to assist you.
